

Ascent360 recommends using **Privnote** to easily and **securely** send passwords, API keys, and other sensitive credentials.

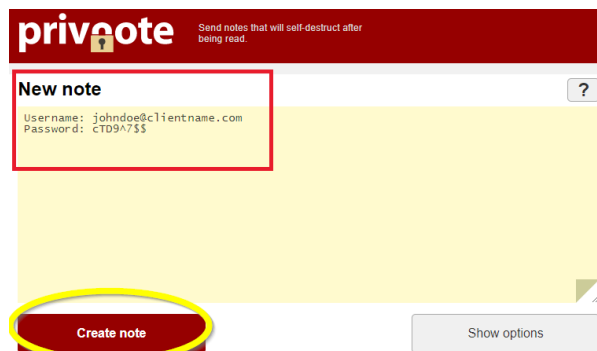

Privnote is a free web-based service that allows you to securely send private notes over the internet. It's fast, easy, and requires no password or user registration.

In this article:

- [How to send a Privnote](#)
- [How to open a Privnote](#)

## How to send a Privnote

- Navigate to <https://privnote.com>
- Input your note text.
- Once finished, click **Create Note**.

- Copy the resulting URL and share it with the recipient.

### Note link ready

<https://privnote.com/6Hz1VmAb#kimd14F1O>

*The note will self-destruct after reading it.*

Select link

E-mail link

- When the recipient clicks the link for the first time, they will see the note in their browser and the note will automatically self-destruct, which means no one (even that very same person) can read the note again.

## How to open a Privnote

- If you receive a Privnote in an email or IM, click the hyperlink. You will need to confirm that you want to open (and therefore "destroy") the note.

### Read and destroy?

You're about to read and destroy the note with id **6Hz1VmAb**.

Yes, show me the note

No, not now

- Once opened, please save the credentials in a secure location or the password manager of your choice. You will not be able to re-open the Privnote.

### Note contents

**This note was destroyed. If you need to keep it, copy it before closing this window.**
