

How to Set-up Page Scrape in Email Designer

Setting up an email to scrape the contents of a webpage is quite simple. Below are step-by-step instructions and a video to help guide you.

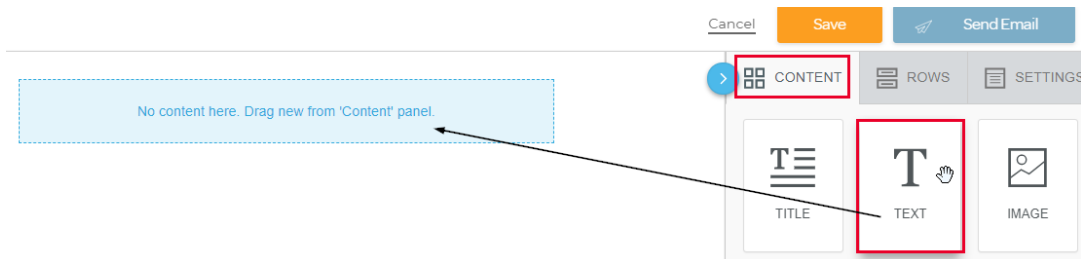

1. From the Email Menu select **Designs**
2. Select **Add a new Design**
3. Select **'start from scratch'** on the templates page

4. In your email design add a **row** (drag and drop into the center canvas)

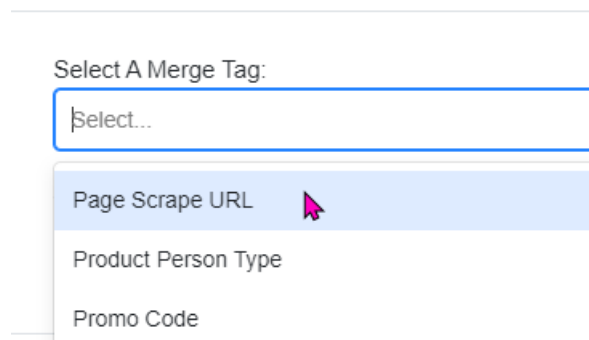

5. From the content section, drag a **text block** into your row

6. From the menu for the text block, select **Merge Tags** on the bottom right
7. Select **Page Scrape URL**

Insert Merge Tag

8. Add a valid URL to the URL field

9. Click **save**
 10. Do not edit the content in the text block
 11. Send a test email to preview your page scrape email.
