

What time zone does the platform display?

The Ascent360 Platform displays all times in Mountain Time (MDT/MST) regardless of what time zone the end user is on. Therefore any export time or email send time is scheduled and displayed in Mountain Time.

The **Mountain Time zone** is an area 7 hours behind **Greenwich Mean Time (GMT-7)** during the winter months (referred to as MST - Mountain Standard Time) and 6 hours behind **Greenwich Mean Time (GMT-6)** during the summer months (referred to as MDT - Mountain Daylight Time).
