Bug Fixes

- **SMS**
 - Fixed a display issue on the SMS Credits Usage page (MMS credits were being miscounted in visuals).
- **Ascent360 ESP**
 - Fixed an issue where recurring email schedules with an end date were not transitioning to Completed after the end date.

01/13/25

What's New

- **General**
 - We've added single-sign-on (SSO) capabilities to our login flow. SSO is setup per domain and allows you to authenticate with your Identity Provider (IdP) rather than use your Ascent360 password. For more, see [Enabling Single Sign-on \(SSO\)](#).
 - For enhanced security, we're now displaying the login date & time of your previous session in the header section of the Client Portal.

Bug Fixes

- **Ascent360 ESP**
 - We cleaned up an issue where recipients were prevented from receiving the same webhook-triggered email in the same day.

01/06/25

What's New

- **Ascent360 ESP**
 - We've introduce a new *Sending* status to the ESP. Whenever an email is actively sending, the email will be in this status; depending on the size of the audience, an email may be in the Sending status for up to 2 hours.
